

Installation code

In this document, we will follow everything we need to get my program running.

First, we will list all the libraries used and everything we need to import:

-PYQT5

```
from PyQt5.QtWidgets import *
```

```
from PyQt5.QtCore import *
```

```
from PyQt5.QtGui import *
```

-socket

```
import socket
```

-time

```
import time
```

-psutil

```
import psutil
```

-platform

```
import platform
```

Then, start the server first and then the client.

-python3 C:\Users\fayca\OneDrive\Documents\GitHub\SAE32\SAE\serveur.py (use your own path, this is an example)

-python3 C:\Users\fayca\OneDrive\Documents\GitHub\SAE32\SAE\MainWindow.py (use your own path, this is an example)

And now the graphical interface will start up, then click on the information you want and the server will provide it to you.
